

IQAir AirVisual Platform

Comprehensive Air Quality Monitoring
for Communities

IQAir AirVisual Sensors

The easiest way to set up your network.

AirVisual Outdoor and AirVisual Pro monitors provide state-of-the-art functionality and integration into AirVisual Platform.

- Monitor a wide range of air parameters including PM1, PM2.5, PM10, CO2, temperature, relative humidity, and barometric pressure.
- View real-time and historic air quality data from your monitor and tens of thousands of other public air quality stations in cities and countries around the world.
- Receive personalized alerts and actionable health recommendations based on local air quality history and forecast.
- Contrast your indoor air quality with outdoor readings from the nearest official monitoring station to get a fuller picture of the air you're breathing every day.
- Cloud computing, big data, and artificial intelligence provide the best predictive analytics in a compact, portable device.
- Publish your outdoor air quality monitor as a public station in a matter of minutes.
- Link your AirVisual sensors to all your building's connected technology or set up smartphone air quality alerts using existing or custom If This Then That (IFTTT) applets.

AirVisual monitors offer turn-key air integration into the IQAir AirVisual Platform to get your monitoring network up fast and easy – no wait to build custom integrations for third-party monitoring devices.

Knowledge is empowering.
