

Air Sensor International Community – *International Conference Hub, Ghana*

In the quickly expanding field of small affordable air quality sensors, ASIC is proud to partner with the Clean Air Fund to develop a conference hyper-focused on the current state of small air quality sensor use in Ghana and the surrounding African countries. To support an equitable transition to cleaner air, an understanding of air quality and how sensors can be used within communities confronted with air pollution is vital to developing effective air quality management practices. ASIC's extensive network of air quality experts alongside the real-world experiences of researchers, regulators, and communities in Africa will present well-rounded research on the importance of integrating small affordable air quality sensors throughout communities.

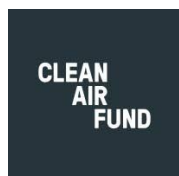

This conference will be held in Accra, Ghana in 2023. We expect to host around 100 attendees in-person and an additional 50+ online. The conference will include 6+ sessions with local and international speakers, exhibit booths, and several poster displays. Additionally, we will host networking opportunities during the breaks and complementary lunch.

In order to keep this educational event accessible to the most people possible, we are providing travel and attendance grants to most attendees participating from African countries. Due to this we are asking for generous support from ASIC partners to make the event successful and ensure air quality improvements can continue to spread across the globe.

We invite you to be a conference sponsor by supporting the planning efforts or travel of participants. Please review the categories and related benefits on the next page, then connect with ASIC Manager, Sandra Hall, sehall@ucdavis.edu to select a sponsorship or create a customized opportunity.
